Hello,

I think you use a translation program, so I write in english.

The black AEG unit is the rectifier, the yellow wires are for AC, red is +, blue is -.

The origine capacitors are MP-capacitors and not electrolytics, normaly they are not fault. Your capacitors are origine,don` t replace them. There is only one capacitor in a metal case, the case is isolated.

Write,if you need a schematic for the receiver.

kindly regards
