Playing also Radio stations when input cable removed?
Have the phono tubes the metal screen caps?
When both yes, ad a lowpass filter with choke and capacitor at the input.
I don't now a aux out at this amp, only a record out at the tape connection.

regards

Thanks for the reply! Yes, I can hear a radio without input cable plugged in. By AUX I mean Tape record output. Currently it goes without volume control, want to move it after, so I will be able to tune the level of my radios, connected as speakers.
