
Subject: Price for 1950s Lorenz radio?

Hi all, I have the opportunity to buy a 1950s Lorenz radio, see pictures attached. It seems that it hasn't been cannibalised, although obviously it will need significant restoration efforts. This is a bit of an odd-ball radio in a metal box, made by Lorenz in 1000x quantities under the Marshall plan and distributed to various locations in Greece.

I am wondering how should I go about pricing this radio - what would be a fair price to the seller? Unfortunately I have no previous examples of this unit changing hands.

There is some information about this device here in our forum on this thread: Lorenz community receiver?

Unfortunately this is almost all we know about it. Even the rm.org page doesn't tell a lot about it.

Even though there were less than 1000 of this devices produced some of them survived until today. The interior looks like a successor of the famous Schaub SG42 (similar to the Lorenz L45W), probably with added SSB support.

So it's very difficult to give a good price information here. I would suspect it somewhere in the 300 € region as the listed device seems to be complete and not too much worn-out. But this is just my own private guess.

Regards,

Dirk
