Hello colleagues, broadcasting on AM MW in many countries and now it is ending in our country as well. A home transmitter can be built or bought, but an antenna is often a problem in residential conditions. My tip for a home antenna for an AM MW transmitter. Maybe inspiration for you.

Dobri Den Jan,

thank you for sharing your project.

But have a look here:
[https://www.gfgf.org/Forum/index.php?t=msg&th=5805&start=0&](https://www.gfgf.org/Forum/index.php?t=msg&th=5805&start=0)

The "GFGF-Konzertsender" has multiple channels.....

Best regards,
Michel

Thank you for your response, this is a nice construction on the same principle. In my post, however, it was mainly about the transmitter antenna. If the wire antenna can already be tuned, it is only for one frequency and the efficiency, with dimensions at home, is poor. So this loop antenna is small, efficient and can be easily tuned throughout the band.
Thanks again and good luck.
Jan
